

SETUP GUIDE

FaceYoguez

Prepare Your Body Before You Begin

Six gentle steps to a safe, effective practice

PRACTICE FOUNDATIONS · FACEYOGUEZ

STEP

1

Your Seat

Create a stable, supported base.

Supported & upright

Avoid slouching

✓ DO THIS

- ✓ **Sit with back support**
Use a chair, bed, or floor with something behind you.
- ✓ **Hips slightly higher than knees, if possible**
This helps your spine stay long and comfortable.
- ✓ **Feet flat on the floor or comfortably crossed**
Choose whatever feels stable and relaxed.

✗ AVOID THIS

- ✗ **No slouching**
Slouching adds pressure to your neck and face and reduces the benefits.
- ✗ **No perching on the edge**
This creates tension in your body and reduces support.

REMEMBER

A stable seat sets the foundation for a safe and effective practice.

STEP

2

Spine & Head

Align for length. Position for balance.

Long spine, lifted crown, chin slightly back

Too much up · too much down · just right

✓ FIND YOUR ALIGNMENT

✓ Spine long, not stiff

Imagine a string gently lifting you from the very top.

✓ Crown gently lifted

A small lift creates space and alignment through the neck.

✓ Chin slightly back

Keep your chin parallel to the floor so the neck stays long.

CUE

“Length before lift.”

REMEMBER

Length in your spine creates space — and space in your body lets your face relax and release.

STEP
3

Elbow Support *(non-negotiable)*

Support your elbows to protect your face.

✓ REST YOUR ELBOWS

Rest your elbows on a stable surface. This reduces pressure on your face and neck. Any of these work:

ON A TABLE

Use a table or

ON PILLOWS (LAP)

Place a pillow or cushion

ON ARMRESTS

Use chair armrests

ON A FOLDED BLANKET

Use a folded blanket

✗ DON'T DO THIS

Floating elbows mean excess pressure on your face, neck, and shoulders.

Floating elbows — strain on face & neck

- ✗ Creates extra pressure on facial tissues
- ✗ Adds tension to the neck and shoulders
- ✗ Can lead to fatigue and less effective results

CUE

“Supported elbows = gentle face.”

WHY IT MATTERS

Support reduces force, lets your face relax, and keeps your practice safe and effective.

Shoulders & Neck

Release tension. Create space.

Roll · drop · lengthen

✓ RELAX SHOULDERS, LENGTHEN NECK

- 1 **Roll shoulders once**
Gently roll your shoulders up, back, and down. Just once.
- 2 **Drop shoulders down**
Let them melt down, away from your ears. Keep them soft.
- 3 **Neck long**
Keep your neck long and relaxed — don't jut your chin forward.

Shoulders up

Creates tension in your neck and traps.

Shoulders back & tense

Over-activates the back and neck.

Chin forward

Shortens your neck and creates strain.

CUE

"If the shoulders are working, the face doesn't need to."

✓ WHY IT MATTERS

- Relaxed shoulders reduce facial tension.
- More space in the neck improves circulation and lymph flow.
- Your face can relax, release, and respond better to the practice.

REMEMBER

Soft shoulders. Long neck. Less effort. Better results.

Hands & Wrists

Soft hands and neutral wrists keep pressure gentle.

Soft fingers, neutral wrists

✓ DO THIS

1

Fingers soft

Keep your fingers relaxed and natural. Use the pads, not the tips.

2

Wrists neutral

Keep wrists in a straight line with your hands. A straight line is safe and easy.

✗ DON'T DO THIS

✗

Bent wrists

Bending creates pressure and strain — keep them straight.

✗

Clawing fingers

Clawing adds tension and can dig into the skin. Keep fingers soft.

CUE

“Relax your hands before touching your face.”

WHY IT MATTERS

Soft hands and neutral wrists reduce unnecessary pressure and protect delicate facial tissues.

REMEMBER

Soft hands. Neutral wrists. Gentle pressure. Better results.

Pressure Self-Check

Check in with your body — keep it gentle, calm, consistent.

✓ CHECK IN OFTEN — IT SHOULD FEEL CALM & EFFORTLESS

✗ DON'T DO THIS

Holding breath

Held stress increases pressure.

Clenched jaw

Tightness spreads through the whole face.

Facial tension

Blocks circulation and limits results.

Pressing too hard

Irritates tissues and causes puffiness.

Pain

A signal to stop and readjust.

GOLDEN RULE

“Fascia responds to time, not force.”

FACEYOGUEZ SAFETY MANTRA

*Good posture controls pressure.
Supported elbows protect the face.
Calm breath creates lift.*
